DETAILED ACTION

- 1. This communication is in response to Applicant's Amendment to Office Action dated December 21, 2004, mailed September 30, 2005, and received by PTO October 5, 2005.
- 1-1. Claims 19 and 20 have been examined and allowed.

EXAMINER'S AMENDMENT

- 2. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- 3. Authorization for this Examiner's amendment was given in a telephone interview with Mr. George W Hoover (Reg. No. 32,992) on June 21, 2006.
- 4. The specification has been amended as follows:
- 4-1. At page 16, line 6, replaces " $(\overline{c_1^{l+1}c_2^mc_3^n} \overline{c_1^{l+1}c_2^mc_3^n}, \text{etc.})$ " as " $(\overline{c_1^{l+1}c_2^mc_3^n} \overline{c_1^{l+1}c_2^mc_3^n}, \text{etc.})$ ".
- 5. The application has been amended as follows:
- 5-1. Replace claim 19 as follows:
- 19. (Currently Amended) A method of <u>analyzing and computing modelling</u> anisotropic turbulent flow <u>quantities</u> in <u>of</u> an anisotropic fluid comprising:

providing input to a general purpose computer defining, for an anisotropic fluid-, a set of moment equations governing time average thermal and turbulent motion, directional kinetic energy, shear, directional kinetic energy fluxes, and structure correlations;

instructing the general purpose computer to calculate n^{th} order, wherein n is odd, directional kinetic energy fluxes and structure correlation equations elosure relationships using $(n + 1)^{th}$ order density gradient independent time average thermal and turbulent moment closure relationships to yield a set of closed time average turbulent moment equations;

using the set of closed time average turbulent moment equations to predict calculate a anisotropic turbulent flow quantity of the anisotropic fluid; and

displaying the calculated turbulent flow quantity;

wherein the set of moment equations governing time average turbulent directional kinetic energy, shear, directional kinetic energy fluxes, and structure correlations is defined by:

Directional Turbulent Kinetic Energy

$$\frac{\partial}{\partial t} \left[\overline{u_{1}'^{2}} \right] + \overline{u_{1}} \frac{\partial}{\partial x_{1}} \left[\overline{u_{1}'^{2}} \right] + \overline{u_{2}} \frac{\partial}{\partial x_{2}} \left[\overline{u_{1}'^{2}} \right] + \overline{u_{3}} \frac{\partial}{\partial x_{3}} \left[\overline{u_{1}'^{2}} \right]
+ 2 \left[\overline{u_{1}'^{2}} \frac{\partial \overline{u_{1}}}{\partial x_{1}} + \overline{u_{1}' u_{2}'} \frac{\partial \overline{u_{1}}}{\partial x_{2}} + \overline{u_{1}' u_{3}'} \frac{\partial \overline{u_{1}}}{\partial x_{3}} \right]

5-2. Replace claim 20 as follows:

20. (Currently Amended) A computer readable storage medium containing a set of instructions for a general purpose computer, the set of instructions defining a method of deriving a set of closed time average turbulent moment equations for modelling analyzing and computing anisotropic turbulent flow quantities in of an anisotropic fluid comprising:

defining, for an anisotropic fluid, a set of moment equations governing time average thermal and turbulent motion, directional kinetic energy, shear, directional kinetic energy fluxes, and structure correlations;

calculating n^{th} order, wherein n is odd, directional kinetic energy fluxes and structure correlation equations elosure relationships using $(n + 1)^{th}$ order density gradient independent time average thermal and turbulent moment closure relationships to yield a set of closed time average turbulent moment equations;

using the set of closed time average turbulent moment equations to predict calculate a	1
anisotropic turbulent flow quantity of the anisotropic fluid; and	
displaying the calculated turbulent flow quantity;	
wherein the set of moment equations governing time average turbulent directional	
kinetic energy, shear, directional kinetic energy fluxes, and structure correlations is defined	
hv.	

Directional Turbulent Kinetic Energy

$$\frac{\partial}{\partial t} \left[\overline{u_1'^2} \right] + \overline{u_1} \frac{\partial}{\partial x_1} \left[\overline{u_1'^2} \right] + \overline{u_2} \frac{\partial}{\partial x_2} \left[\overline{u_1'^2} \right] + \overline{u_3} \frac{\partial}{\partial x_3} \left[\overline{u_1'^2} \right]

Reasons for Allowance

6. The following is an Examiner's statement of reasons for allowance:

- 6-1. The closest prior art of record discloses:
- (1) Deriving a solution of the Boltzmann equation for a gas with unequal directional kinetic energies (Kliegel, "Maxwell Boltzmann Gas Dynamics").
- (2) A simple anisotropic turbulent flow model (Rylov et al., "A Simple Model for Anisotropic Turbulent Flow in Open Channels").
- 6-2. Independent claim 19 is directed at a method of analyzing and computing anisotropic turbulent flow quantities of an anisotropic fluid. This independent claim identifies the distinct combination of features including "calculate n^{th} order, wherein n is odd, directional kinetic energy fluxes and structure correlation equations using $(n + 1)^{th}$ order density gradient independent time average thermal and turbulent moment closure relationships to yield a set of closed time average turbulent moment equations", "using the set of closed time average turbulent moment equations to calculate a turbulent flow quantity of the anisotropic fluid", and a set of moment equations, which has not been uncovered in a single teaching, nor would a modification of prior art references be obvious to one of ordinary skill in the art to yield these limitations in the context of the claim. Claim 19 is deemed allowable.
- 6-3. Independent claim 20 is a computer-readable storage medium claim reciting equivalent method limitations as in the allowable claim 19 and is deemed allowable for the same reason as claim 19.
- 7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for

Allowance."

Conclusion

8. Any inquiry concerning this communication or earlier communications from the

Examiner should be directed to Herng-der Day whose telephone number is (571) 272-3777. The

Examiner can normally be reached on 9:00 - 17:30.

Any inquiry of a general nature or relating to the status of this application should be

directed to the TC 2100 Group receptionist: (571) 272-2100.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's

supervisor, Kamini S. Shah can be reached on (571) 272-2279. The fax phone numbers for the

organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
